⚡ REPLICA™

Zero-Trust Isolated Environments
Instant. Isolated. Frictionless

About Replica

Replica Cyber delivers zero-trust isolated environments as a service, purpose-built to secure and accelerate high-stakes digital operations—from threat intelligence to AI experimentation, without burdening IT or slowing innovation. Instantly deployable environments enable teams to experiment, investigate, and collaborate securely, transforming security from a barrier into a catalyst for innovation.

Built by Counterintelligence Experts, Trusted by Enterprise Leaders

Defense-Grade Technology for Enterprise Innovation

Replica brings DoD-trusted isolation to the enterprise, combining zero-trust security and counterintelligence-grade control for high-stakes work. Born from decades of operational experience in the Intelligence Community and Department of Defense, our platform creates instant secure environments that enable teams to operate confidently in untrusted digital territory.

The Replica architecture delivers protection across OS, network, applications, and data that go far beyond browser-only solutions. The platform serves as an anonymous attack surface with built-in managed attribution, persona management, and controlled network routing that eliminates attribution risk, protecting both organizations and practitioners. Instant deployment eliminates IT dependencies, transforming security from a barrier into an accelerator.

Trusted by Fortune 100 companies and government agencies, we deploy environments in seconds that scale to 10,000+ users with comprehensive compliance logging.

The Replica Advantage

Instant Deployment
SaaS-delivered, fully orchestrated, fully managed platform allows for instant, scalable activation of secure environments.

Full-Stack Isolation
Complete protection across OS, network, applications, and data—going far beyond browser-only solutions to protect operations end-to-end.

Secure Collaboration
Realize cross-team, cross-agency, and partner collaboration while preserving environment isolation, and data control.

Comprehensive Audit & Compliance:
Comprehensive audit logging, data governance controls, and real-time oversight support regulatory compliance requirements.
