

The Replica Platform

Zero-Trust Secure Environments

Instant. Isolated. Frictionless

Organizations conducting high-stakes digital activities face a persistent challenge: traditional security solutions are incomplete, inefficient, and unreliable.

VPNs, browser isolation, and virtual machines may seem easy and cost-effective, but they require long implementation times, limit access, stifle innovation, and introduce operational friction that slows productivity. These traditional solutions no longer work.

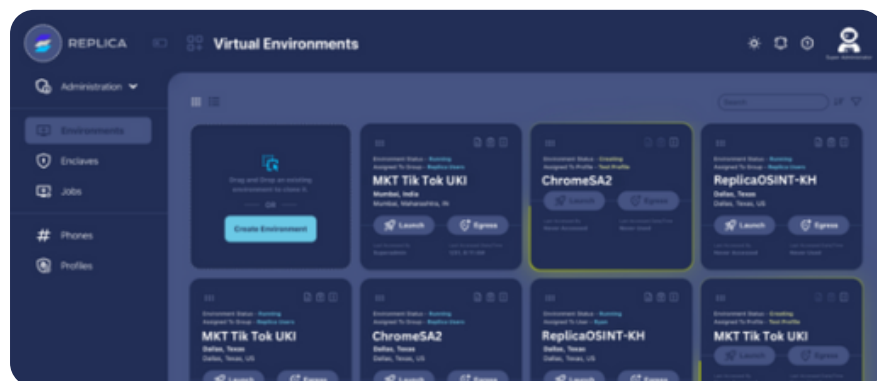

Replica solves this challenge with patented, zero-trust secure environments that give your teams the power to operate with confidence, whether hunting threats, analyzing malware, developing new capabilities, or accessing platforms where your presence alone could signal intent.

When your work introduces risk, or you don't want lurkers observing, Replica keeps you protected.

Security is the Foundation Innovation is the Outcome

Replica delivers zero-trust isolated environments, forged from intelligence community tradecraft and protected by 21 patents. Built by practitioners for practitioners, our solution enables instant deployment that scales effortlessly from 5 to 10,000+ users.

With patented technology protecting both users and their orgs, Replica enables high-stakes digital activities while maintaining complete anonymity, all with seamless integration into existing ecosystems.

Key Capabilities

INSTANT SECURE ENVIRONMEMNTS

Deploy fully isolated, protected digital labs & workspaces in seconds without IT overhead or security delays

UNATTRIBUTABLE ACCESS

Access geo-blocked content, dark web sources, and closed forums anonymously

COMPLETE SYSTEM ISOLATION

Isolate your private activities across all system layers with patented, zero-trust architecture

ENTERPRISE CONTROL

Balance operational security with complete visibility through comprehensive audit trails and compliance controls

Secure, Unrestricted Access, and Complete Control

From Fortune 500 companies to government agencies, organizations rely on Replica to accelerate important work that traditional solutions slow down or block entirely. Our platform enables digital operations across business acceleration and organizational security—enabling teams to operate quickly and efficiently without compromising protection.

- **AI & Development Sandboxes:** Safely experiment with AI and emerging technologies while accelerating secure development workflows—protecting IP and eliminating production risk.
- **Third-Party Collaboration:** Collaborate with co-workers, partners, and vendors on sensitive operations securely, anonymously, and without exposing your systems, strategy or data.
- **Threat Operations:** Investigate active threats and conduct OSINT research across digital channels—securely, anonymously, and without exposing internal tools or infrastructure.
- **Malware & Dark Web:** Analyze malicious code and investigate dark web threats—from marketplaces to actor communications—without attribution or system compromise.

The Replica Advantage

Built by Former Intelligence Professionals

Replica was born from decades of cyber counterintelligence experience. Every capability is rooted in operational tradecraft proven in the most sensitive missions.
