Threat Intelligence and Research
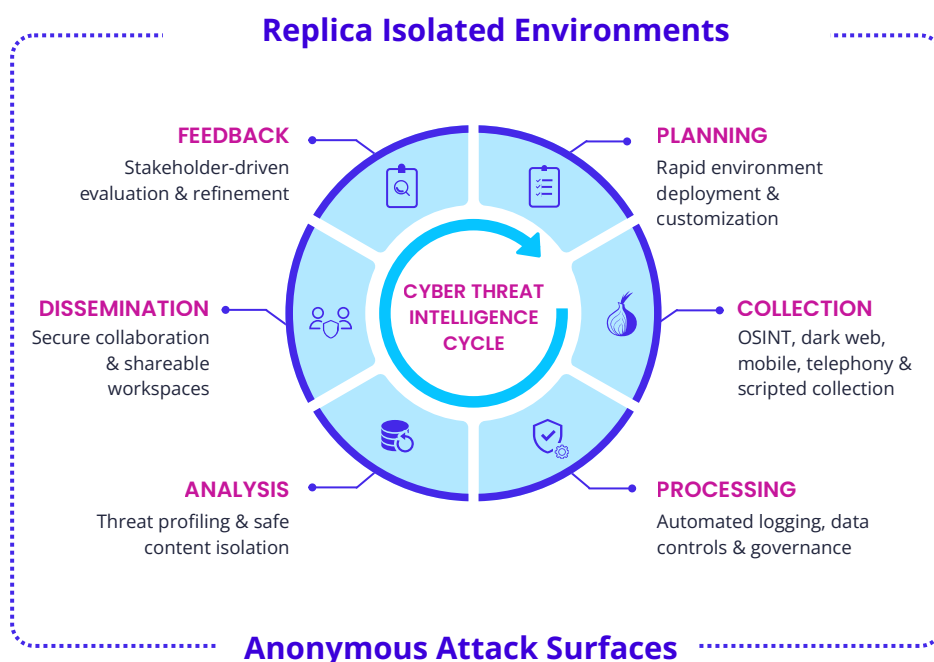

REPLICA
POWERED BY GREY MARKET LABS

Replica Isolated Environments
Instant. Secure. Frictionless

Enterprise-Grade Platform for Secure, Scalable, and Anonymous Threat Intelligence Operations

Threat intelligence teams are under pressure to move faster, go deeper, and stay invisible. But traditional tools—VMs, VPNs, burner devices—create friction, introduce risk, and block access to high-risk, geo-restricted, or telephony-based sources. Vendor feeds often limit visibility or expose organizations to new vulnerabilities, driving teams to build out their own intelligence collection capabilities for greater control, context, and speed.

Replica delivers isolated computing environments that enable enterprise threat intelligence teams to conduct secure, non-attributable research operations at scale while maintaining complete audit visibility and regulatory compliance.

- Instant Deployment
- Full Stack Isolation
- OSINT + Dark Web Access
- Mobile & Telephony
- Secure Collaboration
- Audit -Ready Logging

Replica Isolated Environments

CYBER THREAT INTELLIGENCE CYCLE

FEEDBACK
Stakeholder-driven evaluation & refinement

PLANNING
Rapid environment deployment & customization

DISSEMINATION
Secure collaboration & shareable workspaces

COLLECTION
OSINT, dark web, mobile, telephony & scripted collection

ANALYSIS
Threat profiling & safe content isolation

PROCESSING
Automated logging, data controls & governance

Anonymous Attack Surfaces

Business Challenge

Threat Intelligence Operations - Risk Factors

As teams expand their collection capabilities, they rely on fragmented toolsets that expose both analysts and organizations to adversaries—compromising investigations and revealing strategic intent. Working in isolation without secure collaboration, analysts create bottlenecks, miss critical intelligence, and introduce compliance gaps.

Current State Limitations:

- Reliance on unauthorized shadow IT tools and improvised solutions
- Geographic and device-based access restrictions limiting intelligence collection
- Inadequate persona management resulting in detection and attribution
- Infrastructure risk from direct exposure to malicious content and domains
- Insufficient collaboration capabilities for cross-team and inter-agency operations
- Limited audit trails failing to meet enterprise compliance requirements

Replica Isolated Environments

The Solution

Transform your threat intelligence operations from reactive monitoring to proactive collection. Replica enables your team to safely navigate dark web marketplaces, engage with threat actors, and collect OSINT from restricted sources—including mobile apps and telephony—while ensuring non-attribution through full isolation of your tech.

The Replica platform delivers one-click deployment in seconds with full audit and compliance with IT requirements.

Key Capabilities

Dark Web Research
Safely investigate marketplaces and forums with authentic personas

Global OSINT Collection
Broad access to geo-restricted and mobile intelligence sources

Mobile & Telephony Access
Physical devices with SMS, apps & MFA; softphone for voice

Cross-Team Collaboration
Secure intelligence sharing with comprehensive audit trails

From Reactive Defense to Proactive Intelligence

Replica provides an anonymous attack surface that empowers organizations to run their own threat intelligence operations—whether collecting external data from high-risk sources or validating vendor feeds in-house while automating IT burden—freeing teams to focus on high-impact threat analysis.

The Replica Advantage

Infrastructure Protection:
Anonymous attack surfaces shield your infrastructure and your practitioners through pixelated video streaming—no code ever reaches your network while maintaining authentic online signatures.

Advanced Attribution Management:
Flexible networking options and persona creation enable anybody-from-anywhere access with non-attribution.

Enterprise Capabilities:
Multi-modal environments, robust API to integrate with other tools, and proprietary Butler data management system for secure, customizable file transfer means complete coverage.

Comprehensive Audit & Compliance:
Enterprise-grade forensic logging including PCAP, DNS resolution, and screen recording with chain of custody controls and real-time management oversight.

Built by Former Intelligence Professionals
Replica was born from decades of cyber counterintelligence experience. Every capability is rooted in operational tradecraft proven in the most sensitive missions.
